For over 50 years, Tapeswitch Corporation has been a leader in Safety and Signaling products. August 1<sup>st</sup>, 2009, Tapeswitch announced there partnership with Castell, a long time manufacturer of Trapped Key Interlocks.

Trapped key interlocking guarantees that personnel to follow a predetermined sequence of tasks that will ensure that all hazards and risks associated with the process are controlled. Trapped key interlocking can be used in a wide variety of applications, such as machine guarding, machine control, switch gear, valve interlocking, process control and most importantly, personnel safety. .

Available in both brass and stainless steel, trapped key interlocking is simple but highly effective technology that will ensure a safe system of work is followed when operating dangerous machinery or working with a dangerous process. If you wish to control a process with is hazardous and has the potential to cause injury to personnel and/or damage to the environment, then the fitting of a correctly specified trapped key interlocking system will ensure work is carried out safely and without risk.

Both Tapeswitch and Castell agree that their mechanical trapped key interlocks are the perfect compliment to Tapeswitch's electrical and photo-electric safety line of equipment.

For more information on Tapeswitch's new line of trapped key interlocks nad there extensive line of products, please call 631-630-0442 or email [blipsman@tapeswitch.com](mailto:blipsman@tapeswitch.com)
