With the addition of the PRSX/4 Expansion Module to Tapeswitch's line of controllers, additional safety outputs may easily be added to any Tapeswitch controller.

Tapeswitch announced today the addition of their new PRSX/4 Expansion Module to their comprehensive line of controllers. The PRSX/4 can be used for both sensing controllers and light curtain controllers.

The PRSX/4 Expansion Module increases the number of normally open force guided contact by 4. An additional normally closed feedback relay is also provided. Several expansion modules may be connected to one controller.

For more information on Tapeswitch's new PRSX/4 Expansion Module, contact one of their factory application engineers at 1-888-234-8273 or visit their website at www.tapeswitch.com to find a local sales representative for additional assistance for your application.

Tapeswitch designs and manufactures innovative sensing, switching, and control products for use in machine guarding, personnel protection and other safety and control applications. Tapeswitch products include ribbon switches, sensing edges, and bumpers, safety mats, touch pads, controllers, and light curtains. Extensive custom design services are available.
